INTRODUCTION
The role of the Pacific Ocean is taking on increasing importance in Pre-Columbian, Colonial, and Contemporary studies of the indigenous peoples of the Americas. Recent research in regions as diverse as Mesoamerica, Central America, Ecuador, and the American Southwest are identifying significant forms of mutual social and economic interactions that are entirely changing our understanding of cultural transformations across the Americas. Lustrous turquoise, gold, and exotic shells; colorful dyes and feathers; and delicious cacao beans were extensively produced and exchanged between these cultural areas. Our project focuses on a key region within this vast system—the southern Mexican state of Oaxaca and its adjacent Pacific Coast—a rugged geography further shaped by millennia of population movements over land and sea.

Oaxaca is home to 16 distinct ethnolinguistic groups who speak over 200 variants, the most ethnically complex and biologically diverse state in Mexico. Operating within these transnational sociocultural networks, for over two millennia Oaxacan indigenous cultures constructed monumental sites here; ruled over vast city-states; invented complex writing systems and iconography; and crafted among the finest artistic traditions in the world, some of which are still perpetuated to this day. The clash of the indigenous and the European worlds in the 16th century created a unique culture, the legacy of which underlies the modern nation of Mexico. And yet, together with their distinct languages, each ethnic group maintains an autochthonous set of beliefs, festivals, music, and costumes, and preserve an integrated market system together with other cultural forms such as the colorful Guelaguetza festival celebrated across the state.
By traveling from the bustling Oaxaca City through the valleys, mountains, and down to the Pacific Coast, we will continue with our ongoing explorations of the intricate connections between Oaxaca to Puebla and Central Mexico, and beyond to West Mexico and the American Southwest around 900 and 1600 CE. Rather than study these cultural regions as discrete units, this field program is particularly interested in how linguistic, social, political, economic, and ritual networks operate through space and time. In particular, we will continue to expand our inquiries on the role that indigenous contact and colonialism have played in the formation of the cultural mosaic of Oaxaca, and the evolving relationships with European hegemonies after 1522. This year we expand our understanding of this to connect it with contemporary patterns of contact, movement, and change, investigating the theme of continuity and change in the region and beyond, examining internal and external migration. Additionally, we will explore how language plays a role in maintaining this mosaic and how language and culture themselves are increasingly threatened but also maintained in the face of rapid change, both human-caused and natural.

To unravel these research questions, students will be introduced to southern Mexico’s rich mosaic of languages and cultures through introductory excursions and lectures in Oaxaca City and the Valley of Oaxaca. In addition to constructing the necessary geographical, chronological, linguistic, and cultural frameworks for the project, students will learn to evaluate current anthropological hypotheses and debates ranging from Formative-period colonialism to Late Postclassic-Colonial world systems. Furthermore, students will investigate how indigenous languages and cultures in this incredibly diverse area share common features with each other and maintain continuity with the past while changing over time and with contact. We will also examine how contemporary indigenous communities adapt to the rapid changes inherent in the contemporary nation state.

This year we will return to the coastal region between the Port of Huatulco and The Isthmus of Tehuantepec, which our previous research has identified as a strategic hub from the Formative period and up until the 17th century (see a visual culture-history of Huatulco here). This was a dynamic arena where long-term colonial interests were negotiated between indigenous and European powers such as the Zapotecs, Mixtecs, Aztecs, Pochutecs, Chontal, Huaves, Spanish and, even English, Dutch, and French Pirates! The fierce competition over the Pacific Rim first played out on the Coast of Oaxaca, and later climaxed with the Acapulco-Manila Galleon trade that made Mexico a significant player in the first global world system. Up until recently, the key role of these multi-cultural and transnational players in the transformation of southern Mesoamerica and New Spain has gone largely unnoticed, along with the implications for the shaping of contemporary transformations across the continent. Comparing historical maps produced to serve these indigenous and European colonial agendas to the archaeological and contemporary landscapes, we will attempt to reconstruct the historical geography of Huatulco and Tehuantepec and their transformation through time. We will further continue the interdisciplinary documentation and interpretation of the annual festivity at the Chontal village of San Pedro Huamelula, a ritualized performance that encapsulates and reenacts this rich and millennial heritage along the Pacific Rim. This year we will turn our attention to greater linguistic documentation.
ACADEMIC CREDIT UNITS & TRANSCRIPTS

Credit Units: Attending students will be awarded 8 semester credit units (equivalent to 12 quarter credit units) through our academic partner, Connecticut College. Connecticut College is a private, highly ranked liberal arts institution with a deep commitment to undergraduate education. Students will receive a letter grade for attending this field school (see grading assessment and matrix). This field school provides a minimum of 160 direct instructional hours. Students are encouraged to discuss the transferability of credit units with faculty and registrars at their home institution prior to attending this field school.

Transcripts: An official copy of transcripts will be mailed to the permanent address listed by students on their online application. One more transcript may be sent to the student home institution at no cost. Additional transcripts may be ordered at any time through the National Student Clearinghouse: http://bit.ly/2hvurkl.

COURSE OBJECTIVES

No single discipline or approach can completely untangle the multi-tiered relationships between cultural contact, colonialism, and ritual along the Oaxacan Pacific Coast with an eye on continuity and change in the region and in Mesoamerica more generally. Accordingly, since 2009 the theoretical and methodological underpinnings of our program have been firmly based on a rigorous interdisciplinary training in the field, group and independent assignments, and the development of a research design through cultural immersion. In order to approach such complex themes in their proper cultural context, students will conduct interactive exercises in ceremonial centers and off-the-beaten track archaeological sites and museums, learn to decipher and employ indigenous pictorial documents and European maps, experience urban and rural lifestyles in various geographical and cultural areas, conduct basic linguistic research, visit sacred sites where rituals are still being performed today, and actively participate in local festivities (see video from past field seasons here). In the village of Huamelula and the city of Juchitán, students will also experience first-hand the implementation of collaborative strategies with indigenous stakeholders as an integral part of the research process. This year, our festivity documentation in Huamelula will directly contribute to the new community museum and cultural center of the village and help to create an audiovisual documentation of the indigenous language as relating to the fiesta. By bringing together archaeological, ethnohistorical, ethnographic, linguistic, and art historical sources and approaches to shape method and theory, our students will be encouraged to pursue their own interests. As it is our ongoing goal to promote future undergraduate and graduate research in this region, all students will be further familiarized with the institutional practicalities of conducting academic investigations in Mexico.

Finally, through the study of long-term cultural processes in southern Mexico, students will gain a better understanding of this fascinating modern nation-state and its direct impact on contemporary issues. Oaxaca currently has one of the highest indices of out-migration to the US, brought by the combined consequences of long-term colonialism and neo-colonial agendas. This stimulating study environment will therefore challenge students to question the nature of restrictive boundaries — disciplinary, geographical, cultural, political, and personal — that stand in the way of a truly ground-breaking anthropological scholarship.

The course is primarily intended for students in Anthropology, Archaeology, Linguistics, History, Art History, Latin American Studies, Chicana/o Studies, Religious Studies, Gender Studies, Queer Studies, Geography, Political Science, Interdisciplinary Studies, and all those others who are keenly interested in Mexico’s past, present, and future. Please note that in compliance with Mexican policies, this field school does not involve an active archaeological excavation. All data resulting from this project are
historical, ethnographic, and linguistic in nature, intended to be integrated with published and observed archaeological records.

**DISCLAIMER – PLEASE READ CAREFULLY**

Our primary concern is with education. Traveling and conducting field research involve risk. Students interested in participating in IFR programs must weigh whether the potential risk is worth the value of education provided. While risk is inherent in everything we do, we do not take risk lightly. The IFR engages in intensive review of each field school location prior to approval. Once a program is accepted, the IFR reviews each program annually to make sure it complies with all our standards and policies, including student safety.

We do our best to follow schedule and activities as outlined in this syllabus. Yet local permitting agencies, political, environmental, personal, or weather conditions may force changes. This syllabus, therefore, is only a general commitment. Students should allow flexibility and adaptability as research work is frequently subject to change.

Although it is exciting to travel and explore new places, this is neither a vacation nor spring break—it is a serious and demanding university course, with all that is implied. Students are expected to attend all scheduled activities, be punctual and come prepared, take daily notes, complete all the required assignments, and actively participate in discussions. If you are sick or unable to attend lectures or excursions for any other justified reason, you have to advise the staff in advance. Cheating, plagiarism, or any other form of academic dishonesty will not be tolerated and will be dealt with according to IFR policies.

Note that traveling in a large group and in a foreign country can be quite challenging, and field conditions are often rudimentary. The Pacific Coast is hot and humid, while rains are common during the afternoons. The food is a far cry from Taco Bell, and may require some time to get used to. Students can expect long hours of travel through winding roads, where active learning typically takes place. Internet connection can be spotty and often inexistent.

Culture shock is often inevitable but students are expected to demonstrate emotional maturity, flexibility, and behave respectfully to local people as well as to fellow students and staff. We will be living in and interacting with an indigenous community, and students will be further instructed on cultural relativism and sensitivity.

Zika is a concern on the coast as anywhere else below 6,500 feet, and students should protect themselves at all times with mosquito repellent. At the moment, pregnant women and those trying to get pregnant are not advised to travel to Mexico. At the same time, the Valley of Oaxaca and the Bays of Huatulco are among the most popular and *exciting* tourist destination in Mexico, and our students take full advantage of that!

If you have medical concerns, please discuss them with your doctor. All other concerns may be discussed with the project directors—as appropriate.

**PREREQUISITES**

The ethnographic and linguistic documentation of the Huamelula indigenous festivity obligates us to protect the rights of our Chontal collaborators. All investigators and students will be covered by an IRB from CSULA and will have to participate in an on-line tutorial.

Students must be able to participate in day-long hikes and conduct research in hot weather. If you have any concerns regarding the physical difficulty of the program, please contact the program directors in advance. Although not a prerequisite, knowledge of Spanish is highly desirable and we recommend learning as much as possible before leaving for Mexico. During the Huamelula festivity, each research
team will be accompanied by at least one bilingual translator. There are no other prerequisites for this field school.

**LEARNING OUTCOMES**

Upon successful completion of this course, students will be able to:

- Obtain an advanced level of understanding of the major social, political, and economic changes that occurred in southern Mexico from Pre-Columbian to modern times, as well as how these affect contemporary issues in the US
- Learn to identify arguments in anthropological and historical scholarship and to evaluate them through data gathering and critical thinking skills
- Analyze primary sources and evaluate archaeological evidence
- Understand the basic tenets of linguistic description and documentation and create basic linguistic documentation and description.
- Learn to develop an interdisciplinary research design, modeled on the integration of archaeological, documentary, ethnographic, linguistic, and art historical lines of evidence
- Develop collaborative and teamwork skills in field exercises and final project
- Develop oral communication skills through group presentations
- Develop written communication skills through weekly assignments and a final written report

**GRADING MATRIX**

Undergraduate Students:

1. Active participation (40%)
2. Three field assignments (30%)
3. A final group project (30%)

Graduate Students:

1. Active participation (40%)
2. Three field assignments (15%)
3. A final group project (30%)
4. A final research paper (15%).

Field assignments consist of short written reports, 2-3 pages each, designed to allow students to practice independent research design and interdisciplinary thinking. Ideally, these would follow the student’s existing and developing interests as can be accommodated within the project’s broader research agenda. Students are therefore encouraged to discuss any ongoing research interests with the staff well in advance. The final group project will be based on research themes assigned by the project directors during the first week of the program, and which each research team of 3-5 students will pursue and present (orally and in writing) during the last week of the project. Graduate research papers will consist of 10-15-page original work, on a theme decided together with the program staff and submitted up to two weeks after the program’s conclusion. Detailed guidelines will be provided during the orientation and throughout the program.

**TRAVEL & MEETING POINT**

Hold purchasing your airline ticket until six (6) weeks prior to departure date. Natural disasters, political changes, weather conditions and a range of other factors may require the cancelation of a field school. The IFR typically takes a close look at local conditions 6-7 weeks prior to program beginning and make Go/No Go decisions by then. This time frame still allows the purchase of discounted airline tickets while protecting students from potential loss of airline ticket costs if we decide to cancel a program. Students are responsible for making their own travel arrangements to the Xoxocotlán International Airport in Oaxaca City (OAX). Please plan to arrive to Oaxaca City on Sunday June 16, between 8 am and 6 pm. All students will meet with the project personnel at the airport and leave together to the designated hotel. Orientation and classes will begin promptly on Monday June 17, at 9 am.
If you missed your connection or your flight is delayed, please call, text or email project director immediately. Project cell phone number will be provided to all enrolled students.

**VISA REQUIREMENTS**

US citizens do not require a visa to enter Mexico for less than 180 days but must have their passport valid for at least six months and have at least one blank page for the entry stamp. Travelers with passports that are found to be washed, mutilated, or damaged may be refused entry to Mexico. Citizens of other countries are asked to check the Mexican Embassy website page in their home country for specific visa requirement.

**ACCOMMODATIONS**

Students will be staying in hotels, local inns, and with host families while traveling through the different regions of Oaxaca and the Pacific Coast. All students will be sharing a room based on room size and availability. In Huamelula, students will be sleeping on inflatable beds and/or hammocks.

Oaxacan food is a wonderful blend of Indigenous and European cuisines, and dining is a cultural experience in itself. Breakfasts and dinners are usually taken in local restaurants and diners, and light lunches in the field mostly consist of sandwiches. Specialized diets (vegan, kosher, etc.) are difficult to maintain, and vegetarians might find options fairly limited. Breakfast, lunch, and dinner are provided by the program 6 days a week. Students are responsible for their meals on free days each weekend.

**COURSE SCHEDULE**

All IFR field schools begin with safety orientation. This orientation includes proper behavior at the field area, proper clothing, local cultural sensitivities and sensibilities, potential fauna and flora hazards, review of IFR harassment and discrimination policies, and review of the student Code of Conduct. (**Itinerary and timetable are subject to adjustments. See map above for locations marked in blue**)

**WEEK 1- THE VALLEY OF OAXACA AND THE MIXTECA**

**Sun, 6/16**  Arrive to Oaxaca City (pickup at OAX airport); welcome dinner and orientation.

**Mon, 6/17**  *Excursion*: Orientation of the historical center; Santo Domingo church; San Pablo ex-convent.  *Classes*: Introduction to interdisciplinary methods and research institutions; Oaxacan archaeology, languages, history, and ethnography.  *Readings*: Campbell 2018; Zborover 2015a; Zeitlin 2001.

**Sat, 6/22**  Mixtec highlands, continued exploration.

**Sun, 6/23**  Free day in Oaxaca City.

**WEEK 2- THE PACIFIC COAST**

**Mon, 6/24**  Travel to the Pacific Coast.  *Class*: The Valley-Mountain-Coast cultural and natural mosaic  *Readings*: Pohl 2016.
Tue, 6/25  Excursion: Orientation of Huatulco Port and area. Class: Pochutes to Pirates: cultures and languages of the Pacific Coast; Indigenous and European cartographies. Assigning final project teams and research themes; 1st field assignment due.

Fri, 6/28  Documenting the Huamelula festivity; group discussion.
Sat, 6/29  Documenting the Huamelula festivity; group discussion.
Sun, 6/30  Documenting the Huamelula festivity; group discussion. 2nd field assignment due.

WEEK 3- THE ISTHMUS OF TEHUANTEPEC

Mon, 7/1  Free day in Playa Cangrejo.
Thu, 7/4  Excursion: Juchitán (Zapotec town); the market and recovery from the 2017 earthquake. Class and Exercise: Indigenous market systems; linguistic diversity; internal and external migration. Readings: Campbell 1990.
Sun, 7/7  Free Day in Juchitán.

WEEK 4- ISTMUS AND OAXACA VALLEY

Mon, 7/8  Excursion: Tehuantepec (Zapotec town). Travel back to Oaxaca City.
Tue, 7/9  Excursion: CEDELIO and Tlacochahuaya; Class: language and education in Oaxaca; Colonial Zapotec texts. Readings: Munro et al. 2018. References: see ‘Córdova’ and ‘Ticha’ in ‘Recommended Websites’ below.
Wed, 7/10 Preparation for final project presentations.
Thr, 7/11 Group presentation of final projects. Participation in the Guelaguetza festivities.
Fri, 7/12 Free day in Oaxaca City; closing dinner.
Sat, 7/13 Travel back home or continue explore Mexico on your own.

EQUIPMENT LIST

Students will need to bring field notebooks and, preferably, some sort of audio-visual apparatus for basic field documentation (most smartphones, tablets, or digital cameras will do). Laptops or tablets to write assignment on are also recommended. There is no other specialized equipment needed to participate in this program, other than the usual items needed to travel and study abroad. An orientation packet with a detailed list of recommended equipment will be provided to all enrolled students prior to departure.
REQUIRED READINGS (will be provided to enrolled students prior to departure)
